

February 17, 2009

Ted,

National Automated Solutions is a dealer installer of HySecurity gate operators and related products for perimeter security. We are always looking for products in the industry that are high quality and most of all cost affective time wise to install. National automated Solutions did 53 installs last year and couldn't have done it unless we used saw cut loops from BD loops. The difficulty and time it takes to saw cut and run loop wire in any finish grade material is a thing of the past as far as we are concerned. It make no sense to do things the old way when there is a product out there like BD loops that will save you 30 – 45 minutes on each loop install. The material that is used to make BD saw cut and preformed loops are way advanced than any other product out there in the industry today. Any installer that doesn't used BD saw cut loops is not won't be around very long they just won't be able to compete with the installers that are using them and saving time and money which means being more competitive with pricing. In today's markets any money you can save without cutting quality means you are one step ahead of the rest of the installers in the industry. National Automated Solutions fully endorses BD saw cut loops. And have has the pleasure of writing BD saw cut loops in several specs for some of our customers across the nation.

Sincerely

A handwritten signature in black ink, appearing to read 'D. Palenchar', with a long horizontal flourish extending to the right.
