Re: Letter of recommendation

Dear Mr. Dickson:

We are an access controls company in the Denver, Colorado area serving the Rocky Mountain region. Our main core of business is vehicular gates with all the controls. Needless to say we install many vehicle sensing loops and installation time is of the essence along with warranty costs.

We have been installing your saw-cut preformed loops for a few months now and we are finding ever increasing savings in the installation of saw-cut loops. We have yet to return to any of these installations for warranty purposes. In our climate, the road surfaces tend to prematurely crack causing water to infiltrate within the loop thereby freezing during the winter months and causing the loop to "detect" or "fail" thereby holding the gate open. We have successfully installed the saw-cut loops in these conditions with great success.

I highly recommend your Preformed Saw-Cut loops and want to thank you for developing such a great product.

Best regards,
