

TUESDAY JAN. 19

EVERYTHING YOU NEED TO KNOW ABOUT LOOPS

BD Loops Seminar
9:00 to 11:00am

Free Lunch

Linear Seminar
11:30am to 1:30pm

BD Loops popular seminar is coming to Georgia!

Learn Everything You Need to Know about Loops in a free seminar presented by Brian & Shawna Dickson of BD Loops. The seminar is ideal for experienced and new installers alike. Come for a great event, **free lunch** and **relevant education**.

Hosted By:

Seminar Highlights:

Troubleshooting faulty loop systems in half the time.

Learn how to properly size loops for any door, gate, or parking application in just seconds.

Series and Parallel connections - and how they affect your system.

Learn how to take advantage of **Loop Phasing**.

Become a loop expert, save thousands of dollars in labor and materials over the next years by reducing repeat service calls.

Receive your free copy of the Loopalator—This program calculates size and placement of loops for any door or gate application. It can even print off a diagram that can be used **for quoting your systems or given to your installation crew**.

Send your installers Don't miss out on this opportunity to Become a Loop Expert

BD Loops make Phasing simple:
Both our Saw-Cut and Direct Burial Loops have Red & Black lead-in wires. A big advantage over loops wrapped with a single color.

Blade Width
It is very surprising how important blade width is for a proper saw-cut loop installation.
Stuffing a saw-cut loop into an 1/8" groove can cause a lot of issues.
A 3/16" or larger blade should be used to help prevent air pockets, and

Installing Under Pavers
Never lay a direct burial loop on top of a hard surface such as concrete or a slurry when installing

Sand Trick
The sand trick can help mask saw-cut "tattoos" in decorative driveways, and allow you to open the lane quicker.
Mix colored sand from a craft store with play sand to match the surface. View your handouts for a detailed how-to document.

Loop Phasing
Loops that are properly phased will **repel** against each other, creating a dead zone between the loops where nothing can be detected.
Properly phased loops can be pushed as close as 2 feet from the gate on each side.
Properly Phased Loops repel each other.

Hear what installers have to say:

"I've been to a lot of seminars and at this one you actually focus on learning. We took away more than we usually do."

"It was just awesome, now I have 10 more selling pitches for gate systems."

"Being able to see all the displays and demonstrations made everything easier to understand. Hands on presentations like this are the best way to learn."

Give Away Items – Door Prizes – And More!
